### #1: Blower Door Infrared Testing (already completed)

#### Testing Process:

Includes depressurizing the building to measure air changes per hour  
Includes infrared scanning to identify air loss & performance issues  
Includes insulation level evaluation & general condition inspection  
Includes humidity testing & combustion safety check  
Includes multiple page report with recommendations of improvements for optimum building performance.

Testing takes about 1-2 hours on site. Typically you can expect your report w/in a week or less of testing.

**\$325.00**

### #2: House Attic Insulation

#### Project Overview

Currently the attic insulation is at a depth of about 10"-12" of cellulose or avg of R38 or less w/no air sealing. Attic code is R49, recommended to be R60 for our region. We suggest updating the attic.

Includes carefully pulling insulation away from attic penetrations, includes pushing back after air sealing is complete  
Includes installing 4" of two part spray foam over the exterior wall plates  
Includes installing 1" of two part spray foam over interior wall top plates, lights, & attic penetrations  
Includes adding about 12" of cellulose to exceed total attic depth of R60 in accessible attic areas  
Includes post testing after the project is completed

Project to begin Summer of 2023. Project to take about 1-2 days to complete

---

**\$8,000.00**

**TOTAL**

**\$8,325.00**

All materials are guaranteed to be as specified, and the work to be performed in accordance with the drawings and specification submitted for above work and completed in a substantial workmanlike manner.

1. The construction is amply protected with Workers' Compensation, Public Liability and Property Damage Insurance and bonds and licenses where required, in connection with all work to be done by said contractor on the premises. A certificate of insurance will be provided upon request.
